20M CPD 3-41

PROVIDENCE POLICE DEPARTMENT

December 1st. 1943

To: Mr. Kermit Geary, R.F.D. #2, Walnutport, Pa.

From: James Lawless, 209 Fountain Street, Providence, R. I.

Subject:

Sir: Thanks for your report of reception from station W.P.G.F. I have checked our log of Nov. 17th 1943 and find that your report is correct.

We are using an R.C.A. model 250K transmitter using a pair 810s in the final. It uses a class B modulator and is plate modulated. Our antenna is an inverted T pointing Northwest. The input power is 200 mills at 1,500 volts. We have had the frequency measured several times by R.C.A and it is 1,714,033 cycles per second. So if you want to use it as a standard you may do so with confidence as it remains on that frequency practically all the time.

Thanks again for your excellent report.

Sincerely Yours
James Lawless
